PROFILE

Frontend Engineer with **4 years of experience** designing, building, and configuring large-scale **React.js** applications to meet business process and application requirements. Proficient in React.js, component-based architecture, **state management**, **RESTful APIs**, **Git**, and **responsive/mobile-first development**. Known for independently owning solutions end-to-end, contributing actively in team discussions, engaging in code reviews to uphold best practices, and documenting application specifications. Experienced delivering high-quality, optimized applications in **Agile**, cross-functional environments.

PROFESSIONAL EXPERIENCE

Frontend Engineer – GenAI & AI-Assisted Development | Tata Consultancy Services | 2025 – Present

- Part of a team building an internal **Gen-AI platform hosting multiple AI-driven and agentic applications**; designed and developed frontend modules supporting requirement analysis, code generation, and automated testing workflows.
- Integrated **LLM APIs and RAG-based** retrieval pipelines into production UI workflows; applied prompt engineering techniques to improve reliability and accuracy of **AI-generated outputs**.
- Collaborated with backend and platform engineers on **MCP-based tool-use** and agentic orchestration workflows; utilized AI-assisted development tools (GitHub Copilot, Claude) to accelerate delivery.
- Conducted code reviews**, drove quality improvements across the team, and **participated in sprint planning** and technical risk identification within an Agile delivery model.

Frontend Developer | Tata Consultancy Services | 2022 – 2025

- Built and owned frontend components for a **high-impact FinTech SaaS platform**, migrating from .NET to **React.js**, **Redux Toolkit**, **TypeScript**, **GraphQL**, and **MongoDB**; enforced SOLID principles for scalability and maintainability across a multi-team codebase.
- Designed and consumed RESTful and GraphQL APIs with **using Node.js/Express.js**; implemented lazy loading and performance optimization strategies reducing redundant **API calls by ~40%**.
- Owned unit and integration testing with **90%+ coverage using Jest and React Testing Library**; conducted thorough code reviews catching logic errors, performance traps, and security concerns.
- Operated as a subject-matter expert for frontend architecture decisions**; documented application specifications and user guides, contributed solutions independently in team discussions, and ensured adherence to coding best practices through regular code reviews.

SKILLS

Languages & Core: JavaScript (ES6+), TypeScript, HTML5, CSS3, Node.js

Frameworks & Libraries: React.js, Redux Toolkit, Express.js, Tailwind CSS, Bootstrap, MUI, Jest, React Testing Library

Architecture & Patterns: Microservices (UI layer), Modular UI Design, Component Design Systems, SOLID Principles, Lazy Loading, Performance Optimization, Responsive Web Design

APIs & Data: REST APIs, GraphQL, WebSockets, JWT, OAuth, MongoDB

Tools & DevOps: Git, GitHub, CI/CD Pipelines, Webpack, NPM, ESLint, Babel, Docker (basic), VS Code

AI & Emerging Tech: LLM API Integration (OpenAI, Vertex AI), Prompt Engineering, RAG Concepts, Agentic Application UI, MCP awareness, GitHub Copilot, Claude Code

PROJECTS

Pharma Assist — React.js, Redux Toolkit, Tailwind CSS, Firebase, OpenAI

Developed a responsive, end-to-end AI-assisted pharmaceutical web application. Built reusable UI components, implemented streaming LLM responses, Firebase authentication with role-based access control, and a structured dashboard UI optimized for performance across devices.

Yoga Session Booking — React.js, Razorpay, Firebase Auth, Firestore, Tailwind CSS

Built a responsive class booking platform translating designs into clean, high-quality code. Features include Firebase backend, Razorpay payment gateway, user authentication, and Firestore for real-time booking data persistence.

EDUCATION

Bachelor of Technology in Computer Science Engineering | 2018 – 2022 | Rajiv Gandhi University of Knowledge Technologies, Nuzvid
